

Interior Mirror Finish Piece

Thank you for your order of The Z Garage's interior mirror finish piece! This piece replaces the small plastic triangle that covers the bolts that hold the mirror onto the side of your door which is prone to cracking, and having the mounting points rip off during removal.

Installation of the piece is simple with only two mounting tabs. Simply slide the lower portion of the triangle behind the door card and lightly press the lower mounting piece into place and then firmly pop it into the hole from the other side of the finish piece. Then repeat with the top mount which is easier to guide into the correct position.

During removal, carefully work the mounts out of their respective holes. Using a flat blade on the extruded piece attached to the mount works best. Should a mount be ripped off of the triangle, standard superglue works perfect to reattach the mount to the triangle once again.

If you have any questions or concerns about your finish piece, please contact us at thezgarageco@gmail.com or our website at thezgarage.net/contact-us.
