

## Rear View Mirror Mount

Thank you for your order of The Z Garage's solid rear view mirror mount! This new mirror mount replaces the stock mirror mount which is prone to breaking after the 30+ years of holding your mirror up. Our mount fits the form of the original mount preserving the look and function of your stock mirror.

Installation process:

- 1) Unscrew the phillips head screws securing the mirror to the original mirror mount if still attached.
- 2) Unscrew the three phillips head screws securing the original mirror mount to the roof of your Z.
- 3) Using the original screws, screw your new mirror mount in its place until the screws are snug. Be careful not to overtighten the new mount as this may result in cracking the mount.\*
- 4) Holding the mirror onto the mount, screw in the phillips head screw to secure the mirror to your new mount. Some force may be needed to set the screw initially as the screw threads the mount. This will not harm the mount and will securely hold the mirror even after multiple instances of screwing and unscrewing of the mirror onto the mount.

\*Should the mount crack, a replacement can be purchased for a replacement fee of \$5. The longevity of the mount may be lowered if cracked, *however* the mount will still be functional. If you wish to purchase a replacement mount, send us an email at [thezgarageco@gmail.com](mailto:thezgarageco@gmail.com) including your name and order number. Replacement price offered one time. Additional mounts will be regular price.

If you have any questions or concerns about your mount, please contact us at [thezgarageco@gmail.com](mailto:thezgarageco@gmail.com) or our website at [thezgarage.net/contact-us](http://thezgarage.net/contact-us).
